

Abstract

The present invention relates to formulations for administering a growth  
5 hormone secretagogue. More specifically, the present invention relates to sustained  
release formulations for administering a growth hormone secretagogue and  
formulations for administering a growth hormone secretagogue that provide for a part  
of the dose of the growth hormone secretagogue to be administered using an  
immediate release formulation and part of the dose of the growth hormone  
10 secretagogue to be administered using a sustained release formulation.
